

CHAPTER V

CONCLUSION AND SUGGESTION

In this chapter, the researcher presents the conclusion of discussion. In this part, researcher also gives some suggestion for the English teacher, students and also further researcher.

A. Conclusion

The conclusion of the research is Three Step Interview is effective to improve students' speaking ability for eleventh grade of SMAN 1 Plosoklaten. Researcher has calculated the mean of both experimental and control group before they get treatment. The score has calculated using SPSS, for experimental group was 52.75 and control group was 41.375. In addition, the mean score from both group after they got treatment, for experimental group was 78.25 and control group was 63.38.

Based on the mean score above, there has different mean between students from experimental group who taught using Three Step Interview and also students from control group who were not taught using Three Step Interview as a teaching strategy. It can conclude that students who got Three Step Interview as a treatment got higher score than those who were not.

The result of ANCOVA showed that the distribution of data from pre-test and post test were normal. The significant value of pre test is $p (0.881) > \alpha (0.05)$ and the significant value of post test is $p (0.163) > \alpha (0.05)$. Then, the Levene's test result show showed the significant value $(0.71) > \alpha (0.05)$. It

means the ability between experimental and control group is almost the same and the data was homogeneous.

In addition, there was also no interaction between pre test and group, the significant value was $(0.367) > \alpha (0.05)$. Then, there is also enough confident that there is relationship between covariate and dependent variable. Then, the result of calculation is $p (0.000) < \alpha (0.05)$. The significant value $p (0.000)$ is smaller than $\alpha (0.05)$ it means that there is enough evidence to reject the null hypothesis and accept the alternative hypothesis. All in all, the conclusion is Three Step Interview is effective teaching strategy to improve students' speaking ability.

B. Suggestion

Based on the research problem and data analysis the researcher would give some suggestion. Hopefully the suggestion will usefull for the teacher, students and also the further researcher.

1. Teacher

After finished this research, researcher hopes that for an english teacher will give better teaching strategy for students during the teaching and learning process to make the students more interest and enjoy the lesson. In this way, students will have easy way to improve their speaking and also have better skill.

2. Students

Students have to know that English is important, so they have to keep improve their skill, especially in speaking. Better knowledge will bring better future for their life.

3. Further Researcher

For the next researchers who want to conduct Three Step Interview on their research, the researcher suggest that the next researcher could more focus on cundocting Three Step Interview to improve students' speaking ability.
