

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter presents the conclusion to answer the statement problem in the previous chapter and some suggestion to those who are in the educational field, such as the English teacher, the students and the last is further researcher.

A. Conclusion

The aim of this research is to investigate the effect of Realia on the students' writing skill. The researcher has done the field research to investigate the effect of Realia. The conclusion of the research is that Realia give positive effect on the students' writing skill.

The mean score of both groups is almost same in the pre-test, while in the post-test, the two groups have different mean score. The experimental group has better mean score than the control group. The distribution of the data of this research is normal. It is proven by the result of Kolmogorov-Smirnov test that the significant value $p (0.157) \geq \alpha (0.05)$. the variance of the two groups is also equal, it is proven by the result of significant value of Levene's is $p (0.123) \geq \alpha 0.05$. then there is a relationship between pre-test and post-test, as the evidence the result of significant value $0.00 < 0.05$.

Based on the hypothesis testing result, the significance difference is at $(p) 0.00 < 0.05$ level. Since the significant value is smaller than 0.05, there is enough evidence to reject the null hypothesis and then the alternative hypothesis is accepted. It means that teaching writing using Realia is effective.

B. Suggestion

Based on the conclusion above, the researcher would like to offer some suggestion which are hopefully useful for English teacher, students and the further researcher.

1. For English teachers

The researcher offers the Realia as one of the methods in teaching writing. This method can overcome the hesitancy of starting writing and it also avoids the students getting bored. The Realia is not only applicable in writing descriptive text but also in other genres of text such as procedure text, recount text, and etcetera.

2. For the students

The Realia can help students overcome the hesitancy of starting writing. It also makes their writing systematic and well-organized. Therefore, Realia helps students avoid boredom in the writing class.

3. For further researchers

The results of the research can be used by further researchers as information or reference to conduct further research with different research designs or the same design with different skills to develop students' ability by using Realia.
