

CHAPTER V

CONCLUSIONS AND SUGGESTION

This chapter explain and describe the conclusion and suggestion about the research for the final part of the research. The description of conclusion and suggestion can be seen bellow:

A. Conclusion

This part described the conclusion of the correlation between students' motivation and their vocabulary size test which calculated with Pearson Product Moment mentioned that there is no correlation between students' motivation and their vocabulary size test. The data also shows that the coefficient value is 0.117, it means that there is very low correlation between students' motivation and students' vocabulary size. And this reseach was contradict with the previous study wich conducted by Frida Nur Fitriana, Joko Nurkamto, and Handoko Pudjobroto. In their reseach under tittle "A Correlation Between Learning Motivation and Vocabulary Mastery and Reading Competence". The research is about the correlation between motivation and vocabulary mastery and reading comprehension. The research findings show that There is significant positive correlation between learning motivation and reading competence and also there is significant positive correlation between vocabulary mastery and reading competence.

B. Suggestion

Based on the conclusion, the researcher have some suggestion from the research result or research findings:

For English teachers it is not really important to difference in how to teach student in learning English, because both of them have the their own motivation in their learning English. Every teacher can create a new and fun method to teach the students, to make the students feel enjoy to learning English in the class. If the students enjoy to learning English, so learning English is become easy and not tense. It will have an impact to their performance doing activity in class. And the teacher do not need to increase students' motivation to make them have a better result in their vocabulary size because motivation has no corelation in students vocabulay size.

The last for the researcher that interesting in the same study, the future reseacher can use the result of this study to be their references.
