CHAPTER V
CONCLUSION AND SUGGESTION

This chapter is the last chapter for this study. This chapter contains of conclusion of this study. And also the suggestion for the readers and the next reasearchers.

A.   Conclusion

Based on the finding and discussion above, the semiotic analysis on the frequently-used emojis in a whatsapp group can be concluded as follows :

Use of emojis in chatting group community service program (KKN) on the WhatsApp application, which was taken from twelve March 2019 to twenty eighth March 2019.   There are various interpretants produced. Namely, quip, request, happy, curious, obedient, arrogant, ask, rejecting, clarify, order, shy, reinforce the contents of the message, and shock. Of the 13 interpretant, one emoji with the other emojis produces the same interpretant but has different categories of meaning. There are also one emoji with the other emojis that produces the same interpretant and categories of meaning. Why is that? Because, the researcher had compare the true meaning of the emoji with the context of the sentence used. Therefore, the meanings contained in the group chat community service program (KKN) in the WhatsApp application, which was taken from the twelve March 2019 to the twenty-eighth of March 2019 there are two, namely the real meaning and fake meaning.

B. **Suggestion**

The semiotic analysis on the frequently-used emojis in a whatsapp group can be beneficial for department of English language education student, for the next researcher, and whatsapp application users

1. For department of English language education student

The English department student can use this study as reference to improve learning material, especially about semiotic analysis on the frequently-used emojis in a whatsapp group and to broaden their background knowledge about semiotic. Moreover, emoji can be an interesing example for student to learn more about discourse analysis.

2. For the next researcher

This research is expected to be an experience for the development of semiotic analysis using the same theory or other theories. Because this study only analyzes the semiotics of five emojis that frequently-used in a aplikasi WhatsApp group, the next researcher is expected to be able to do more broadly about semiotic of emojis that are used in other social media applications.

3. Whatsapp application users

With the emoji on WhatsApp, WhatsApp users are expected to use it more in delivering messages to emphasize information, emotional expression, form personal characters, and entertain users. The selection of

emoticons must be in accordance with the contents of the message sent, using emoticons not be arbitrary and must be in accordance with the emotions felt at that time. Because if you use it carelessly it will trigger a misunderstanding of the meaning of emoticons and will cause conflicts between fellow users of the WhatsApp application.
