

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter contained the conclusion and suggestions. The researcher provides a conclusion after explaining the findings and discussions in the previous chapter. The conclusion addresses the research questions raised by this study.

A. Conclusion

Based on the findings about EFL students' perceptions of the use of Artificial Intelligence in English learning. This study found that EFL students have a positive perception about the use of Artificial Intelligence. Students like to use Artificial Intelligence to learn English as it makes it easier for students to learn English. It also can improve students' English comprehension, because it is effective in providing explanations and examples. It also makes students confident after learning using Artificial Intelligence. Besides that, Artificial Intelligence also helps students improve their English skills using products of Artificial Intelligence like ChatGPT, and Google Translate. However, they are still concerned about the drawbacks of using Artificial Intelligence.

Through surveys and rationale questionnaires conducted as part of this study, it became clear that students experience challenges when learning to use Artificial Intelligence. 5 students feel that learning using Artificial Intelligence makes them not develop, because after getting the answers they want they no longer study them, the accuracy of the answers is also a challenge they have to face, they are still not sure about the accuracy of the answers and examples given, internet connection is also a problem. Something that cannot be ignored because without an internet connection,

they are not used to accessing it, and the lack of features also makes it difficult for them to learn to use it.

B. Suggestion

For future researchers, this study is only focused on ChatGPT, and Google Translate. Hopefully, future researchers can continue this study by discussing more Artificial Intelligence tools or applications.
