ABSTRACT

Putri, Rischa Oktavia Karolina. *The Correlation between Vocabulary Achievement and Speaking Performance of the Eleventh Bilingual Students of MAN Kunir Wonodadi Blitar*. Advisor 1 Dr. Mukhammad Abdullah, M. Ag, advisor 2 Bahruddin, S.S., M. Pd. Kediri, English Department, faculty of education, STAIN Kediri, 2016.

Key Words: *correlation, vocabulary achievement, speaking performance.*

Vocabulary is one of the essential and fundamental components of communication because it plays important role in improving English skill, especially in speaking. Speaking is the heart of learning English, because it is a priority for most English learners. The concrete problem between vocabulary and speaking performance that often happens can be seen in the teaching and learning process. When the students have limit vocabulary, they will get difficulties understanding the English subject moreover when they want to speak. Speaking is one of the English assessments, so the students should master speaking skill, moreover when they are in speaking performance test.

The objective of this research to find out whether there is a significant correlation between vocabulary achievement and speaking performance of the eleventh bilingual students of MAN Kunir Wonodadi Blitar in academic year 2015/2016. The method used in this research is correlation research. Variable X is vocabulary achievement and variable Y is speaking performance.

The population of this research is the eleventh students of English bilingual class and it also becomes the sample of this research. The sample consists of 34 students of Science Class. The researcher conducts two tests. The first is test to know vocabulary achievement, and the second is test to know speaking performance. Then, the data are analyzed by using Kendalls-tau Formula to know the correlation between vocabulary achievement and speaking performance.

After being tested using *Kendall's tau* correlation coefficient formula in SPSS, the result shows that the value of the correlation between vocabulary achievement and speaking performance is $r=0.411$, then $r^2= 0.168$. It means that the variance students' vocabulary achievement score predicts 17% of the variance in speaking performance.
