

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

The research results have been discussed in Chapter IV. In Chapter V, the author presents the conclusions of this research and some suggestions.

A. Conclusions

Based on the results of research and discussion in Chapter IV, it can be concluded that, first, the development of Android Application-based Learning Media on Descriptive Text material uses the development model (ADDIE), namely analysis, design, development, implementation, and evaluation, the research is limited to the implementation stage, and produces the final product. Second, the feasibility of additional learning media based on Android applications on Descriptive Text material. Learning Media Based on Android Applications on Descriptive Text material about Islamic based on the assessment of material experts get an average score of 95% with the category Very Feasible. The feasibility of Android Application-based Learning Media on Descriptive Text material based on the assessment of media experts gets an average score of 84% with the category Good feasible category. Based on this assessment, the media is feasible to be used as English learning media on Descriptive Text material. Third, the implementation of product trials in grade 7 of one of the Islamic junior high schools in Blitar with a total of 30 students obtained an average average of 82% in the Worthy category. Students' opinions on the questionnaire media are attractively packaged, the material contained in the media is clear, the questions on the media can be used as practice in understanding the material, and the questions on the media can be used as practice in understanding the material.

B. Suggestion

Based on the product quality, weaknesses and limitations of the research discussed earlier, the authors can provide some suggestions for further

product development. Suggestions for teachers, if teachers should use this Android Application-based Learning Media in the learning process of teaching and learning Descriptive Text material about Islam for grade 7. Furthermore, suggestions for students, it is better if students have and use Android Application-based Learning Media on Descriptive Text material about Islam to study at home in order to increase motivation and understanding in learning and creating descriptive text. Then, suggestions for further research for further research are first, the material used should be broader, not just one subject matter. Second, learning media products based on Android applications should be tested not only in one particular school so that they can be used more widely and produce better products.
