

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

This chapter presents the conclusions of the research findings and suggestions for English teachers, students, and future researchers.

A. Conclusions

Based on the results of the interview and observation data above, it can be concluded that the implementation of the independent curriculum is an effort to implement learning in accordance with the rules of the independent curriculum. Starting from preparation, namely organizing the flow of learning objectives, then designing teaching modules which of course must be adapted to the themes that will be conveyed in class, preparing teaching materials to support the course of learning, after all preparations have been prepared, learning can be carried out according to the design in the teaching module. If the planning and implementation stages have been running, of course, the last is the evaluation stage.

Meanwhile, the challenge faced by teachers in implementing the independent curriculum is how to control students during learning so that they can stay focused on following the teacher's directions and trying to think critically. However, this is not easy, most students still cannot focus and think critically. They play games during learning so they don't listen to what the teacher says, then when given an assignment they take it lightly because they answer by searching on Google. Even though what these students do is very ineffective. Because there are still many students who think that an independent curriculum is free to learn in a free sense that has

no positive impact. Whereas what is meant by free here is free to develop thoughts critically. Therefore, teachers play a very important role for students, teachers must provide understanding and goals of what is meant by an independent curriculum and how it is implemented. Then the teacher must also prepare supporting teaching materials, create an interesting learning atmosphere and not make students bored and later aim for students to focus.

B. Suggestions

Based on the results above, the important suggestions conveyed by researchers are as follows:

1. For Teacher

Teachers must be able to create an interesting learning atmosphere and deliver material using various methods so that students can easily understand. Apart from that, teachers must also be able to provide understanding, explain the objectives of how the independent curriculum should be implemented and always encourage students to improve their learning.

2. For Student

Students must be more enthusiastic about learning English and apply the rules of the independent curriculum so that students can improve their learning abilities.

3. For Future Researcher

It is hoped that future researchers can develop or expand it research by determining other variables and can improve quality

instruments in research so that the data information you want to present can be reflect conditions more accurately.
