CHAPTER V

CONCLUSION AND SUGGESTION

This chapter describe about the conclusion of this research. The researcher draw the conclusion based on previous chapter.

5.1 CONCLUSION

In conclusion based on previous chapter, the researcher has followed the steps and the rules of the correlational research and get the final answer that there is low correlation between self-confidence and students speaking achievement. Whereas,Tridinanti(2018), Laisiyah(2017) and also Syahril(2017) have found in each their research medium correation, positive significant correlation and the last strong correlation between those two variables. It can be happen because every research has different setting and different condition.

5.2 SUGGESTION

5.2.1 Next Researcher

For the next researcher, he/ she can investigate the reason or spesific factor of the low correlation self confident level to students speaking achivement in IAIN Kediri. He/ she can investigate another variable first based on (Latha and Ramesh,2012) theory and then add one or two spesific variables.
