

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter describes the conclusion of the research and the suggestion to the certain parties that are related to this research. Here is the description of this chapter.

A. CONCLUSION

This research has been done through some steps to reveal the answers of the research problems that will be concluded in this part. The part of conclusion includes the results of the students' perception on the use of e-learning and the comparison between male and female students. Then after discussion the results, here are two points of the conclusion part.

The first, the students are reported to have moderate perception on the use of e-learning. There are 90 students or 90% from the total of the students who belong to medium category. There are only 2% of students who perceived low perception. Meanwhile, 8% or 8 students belong to high category. The low perception means that the students are not having well-versed attitudes towards the use of e-learning. Then, those 90% students are having good enough perception on the use of e-learning at school. Last, there are 8% of the students have bvery good attitudes towards the use of e-learning. Then, the students' point of view towards e-learning are vary. Those are portrayed in two sides, positive and negative, covered in four aspects namely basic knowledge, readiness, easiness, and benefits.

The second, students' perception on the use of e-learning among gender is reported the same. The result of this study revealed that there is no significant difference on the use of e-learning between males and females. This means that gender doesn't play significant role at determining students' perception on the use of e-learning

B. SUGGESTION

Based on the conclusion that has been described, the researcher would like to give suggestion to some parties. They are the students, the teachers or lecturers, and the further researcher.

1. For the students

For the students, it is important to have good and positive perception on the use e-learning since technology is developed fast nowadays. Students should adapt the technology used on their life especially in their learning process.

2. For the teachers or lecturers

For the teachers or lecturers, it is crucial to be well-prepared on the use of e-learning. As reported on the result of this study that the students think that the teachers are not ready for e-learning, it is needed for teachers to learn the use of technology to support their teaching and learning class effectively. So, many students will be eased at be motivated at joining the e-learning class.

3. For the further researcher

The results of this research give a new contribution for the research in the same field. Moreover, those results complete the result form previous studies which supply reinforcement and also variation of the same research topic. The researcher suggests to the further researcher to make a research wider and vary the research instruments for the validity and reliability of the research.
