

## CHAPTER V

### CONCLUSION AND SUGGESTION

This chapter presents conclusions to answer the problems studied previously and some suggestions for parties who contribute to the field of education, such as English teachers, students, and further researchers to use Google sites on reading engagement in English.

#### A. Conclusion

The purpose of this study was to determine the effect of using Google Sites on reading engagement in class XI students of SMAN 6 Kediri. This study showed that there was a significant difference between students who were taught using Google Sites and students who were taught using conventional methods (printed books). This can be seen in the results of the average pre-learning score for the experimental class of 68.16 and for the control class of 65.12. On the other hand, the results of the average post-learning score in the experimental class were 80.40 and in the control class of 69.48. This states that students' scores increased after being given treatment than before being given treatment. The ANCOVA results show a significance value of  $<,001$  ( $p < 0.05$ ) which means that the value is smaller than 0.05. So this reveals that the null hypothesis is rejected while the alternative hypothesis is accepted. So the conclusion is that the use of the Google Sites platform is effective in the reading engagement of class XI students of SMAN 6 Kediri. In this way, it will be useful in the future in teaching students to read anytime and anywhere because, with Google sites, learning becomes more efficient, interesting, time-saving, and practical.

## **B. Suggestion**

Here are some suggestions that researchers would like to give to the parties who contribute:

### 1. English Teachers

In this study, researchers hope that in subsequent learning, teachers can integrate the use of Google Sites in class. In order for learning to be more structured and efficient for teachers in class or if the teacher is unable to enter, students can still study the material through the platform.

### 2. Students

In this case, it is expected that students can be active during class learning and always use Google Sites wisely for their understanding of new knowledge.

### 3. Further researchers

For further research, it is hoped that it can reach a wider range of subjects. And expand other types of texts not only narrative text.
