

CHAPTER V

CONCLUSION AND SUGGESTION

In this section the researcher would like to present the conclusion and suggestions based on the findings and discussion presented in the previous chapter.

A. Conclusion

The results show google form as an application used in SMAN 1 Ngadiluwih during Online learning. Google Form functions as an educational space and student assignment pocket. Google Form with advantages as an application is able to save automatically, organize neatly and analyze tasks that have been created. X-Mipa 3 class students get meaningful teaching during online activities with learning videos and quizzes that motivate students. Bring new benefits of paper to online form sheets.

There were 11 male and 21 female with a total of 32 students participating in the e-questionnaire about Google Form which became a

reference for the study. Based on the results of the data collection, it can be drawn to the conclusion that students' perception toward the use of Google Form in English learning process is positive. All of that is concluded based on all the results of student statements that have a positive interpretation response, thus showing that most of the students in SMAN 1 Ngadiluwih use media that corresponds to their geographical capacity.

Regarding the learning process, the majority of students consider that the material is delivered in English teacher structurally. Then, the student statement that has been packaged in a description, Google Form has the characteristic of easy and flexible both in terms of time and place. The students also considered that the internet connection, and the obstacles they found during the daring were still below standard. In various articles, the main obstacle of accessibility is not actually the technical operation of the media, because as a large number of students are already trained in digital literacy, but students are hampered by the limitations of their cellular network, this factor is due to all learning activities using online. Google Form comes as one of the media that can minimize the internet cellular network, so that students do not worry against about cellular network capacity to be cut.

The study also revealed that Google Form has made students happy and motivated in doing online learning, provides benefits to make students practice learning independently, make preparations by reading the material beforehand, increase their sense of responsibility

and motivation in learning English, train discipline against the obligations carried out, and reduce student anxiety when understanding lessons.

Lastly, this research reveals that online learning through Google Form, students can get feedback easily, because teachers can directly display the results of learning activities, knowing where their mistakes are, can bring positive stimulation to find the right answers based on the material that has been done. Therefore, from the results of the study can be concluded that Google Form can be applied as an alternative media used for online learning especially in the accessibility of media, interactive nature of learning, understanding materials, achievement of learning outcomes and evaluation services or enrichment attitudes in SMAN 1 Ngadiluwih.

B. Suggestion

1. For the teacher

Google Form is suitable to be used of transferring lesson because it is light to operate anywhere even if students are in remote area with low internet access. But teachers also need to do face-to-face online with the help of other applications in order to achieve student and teacher interaction even if it is limited to a glass screen. All problems faced by students need to be considered in improving the efficiency of the study.

2. For the student

Students can develop lessons given by teachers by filling in the suggestions provided in the Google Form field. In addition, students must have high motivation in online learning, because without it, students will not have a strong motivation to dig deeper into the lessons given.

3. For the future researcher

It is suggested for further study can continue this research on the other school or department. Thus, it can get more varied data and it can improve e-learning implementation in SMAN 1 Ngadiluwih or other school.
