CHAPTER V

CONCLUSION AND SUGGESTION

In this chapter, the researcher draws conclusions from the discussion and gives suggestion.

A. Conclusion

The research was conducted in Islamic Senior High School 4 Kediri. The researcher took sample consisted of 34 students in X IIS2 and 32 students in X IIS4. Based on the findings, analysis, and discussion above, it can be stated that teaching speaking by using Two Stay Two Stray method is successful and effective. The result of Asymp value showed that Sig (2-tailed) 0.005 is lower than alpha 0.05. Therefore, it can be said that is significant and there is a difference in the mean score between two groups, so Ha (alternative hypothesis) is accepted. The student's score has improved, as seen by the mean score of the Pre-test was 34.86 and mean score of the Post-test was 39.95. The higher score in pre-test was obtained 60 and the higher score in post-test was obtained 80, indicates that there is significant difference in students' achievement before and after giving treatment. Two Stay Two Stray method can help students improve their speaking skill especially in terms of pronunciation and vocabulary. When the mean score vocabulary and pronunciation are compared, the vocabulary's mean score is higher than pronunciation. This method is suitable for practice communication. The students can socialize, change information, help each other, and it is interesting technique because the member in a group can come and go.

B. Suggestion

The researcher will provide recommendations based on the findings of this research. The first is the teacher consider to use this method as an alternative in teaching speaking because this method is appropriate for practicing communication. Second, for all readers who have read this research and are interested in improving their speaking skills can use this method. For students who want to improve their speaking skills should try to do or get in the habit of practicing and sharing with the classmates. I suggest for other researchers investigate ad develop this research's topic. It is expected will present new findings and provide many knowledge.
