CHAPTER V

CONCLUSIONS AND SUGGESTIONS

A. Conclusions

For the purpose of this study, it will be concluded that the strategy is effective in improving students' writing skills in SMAN 3 Kediri. We can see about the final precentages of student's success. Before using Know-What-Learn Method, student in the category 72,2%, it means the precentages of student's success is Good, but need to improve student's writing skill.

Student use Know-What-Learn Method, student more comfortable and more persistent. After scoring student's report text, the score improves 16,6%. It means, the precentages of student's success is 88,8%, which is Excellent category.

There are 6 students can reach the score up to 75, so the precentages of student's success is improve, and 4 students still low to 75.

The issue I ran into was learning activities that were initially face-to-face but eventually turned distance learning owing to situations that demanded online learning activities. Students take the teacher's duties lightly, and some students are late in presenting their homework.

B. Suggestions

My suggestion to this school is that this school should apply firmness and discipline in learning, because this action can increase student achievement scores, students are accustomed to acting decisively

disciplined and obedient.

The application of learning in schools should also be improved again by means of teaching that is more efficient, effective and creative. If the application of learning is improved, students will feel more interested and comfortable when learning takes place, whether face-to-face learning or distance learning.
