CHAPTER V

CONCLUSION AND SUGGESTION

This chapter deals with the conclusion which refers to the research findings and related theory. The second part of this chapter presents suggestions to the school/institution, students, and the next researcher.

5.1 Conclusion

Based on the research finding in the previous chapter, it can be concluded that there is a significant correlation between students' listening comprehension and speaking skill. The research shows that for normality test, the data is in the not normal distribution since the significance value = 0.000 is lower than 0.05.

The correlation is in the high level, 0.655. It means that is a correlation between Arabic pronunciation skill and English pronunciation skill of the students at the level significant 0.01 and the number of respondents are 30, so the correlation is significant and it has a high correlation.

Therefore the researcher summarizes that Arabic pronunciation skill really gives contribution and has correlation to the ability of speaking especially in English pronunciation it self. A good English pronounce is gotten from the better skill in Arabic pronounce.

5.2 Suggestion

At the end of this paper, the researcher would like to offer some suggestions, for the lecturers and the learners, also recommendation for future researchers.

For the teacher, knowing the result of this research, they are suggested to give students input of trial and practice pronouncing word of English and give word that similar pronounce with Arabic, it will be an encouragement and references for students to their poronunciation ability. Therefore, before asking students to speak the teachers are better to expose the language as much as possible, so the students have reach vocabularies and know how to speak.

For students, they are suggested to enrich their knowledge through pronounciation ability by drill methode also memorizing word of English.

For the next researcher who wants to conduct correlational research in Arabic and Englsih pronounciation skill, they are suggested to investigate the topic more completely and comprehensively, also to concern more to stimulate students to pronounce well. Hopefully, this suggestion can be beneficial for the next researchers.
