

CHAPTER VI CONCLUSION AND SUGGESTION

This chapter presents two parts, there are conclusion and suggestion. Conclusion part consists of concluding of this research and suggestion part consists of suggestion based on this research.

A. Conclusion

According to the finding and discussion section in previous chapter, it concluded that most of conclusion sections of undergraduate thesis in each paragraph and sentence of the analyzed data there are elements that indicate that the text is cohesive and coherent. It is marked by several signs which indeed show a coherent and cohesive nature.

In the coherence of a text, the cohesion device here has an important role. In their work, the grammatical cohesion device that they use the most is the conjunction device with a total of 83% (2819) usage, and in the second position there is a reference device as much as 16% (541) use, while for ellipsis and substitution devices the percentage is very small. , even for the ellipsis device is not at all in.

B. Suggestion

The suggestions are given to the lecture, the university, the students and the future researcher.

a. For the Teacher

The researcher hopes the result of this research become reference in the teaching and learning process. The researcher hope the teacher should give a lot of practice so that students can use cohesive devices effectively.

b. For the Students

For students, it is hoped that they will be more aware in using cohesion devices because in writing a text, cohesion devices have an important role in creating a good writing in order to make their writing is easily understandable and logic. Before they use cohesion, they must have learned and understood about them in advance.

c. For the University

For the university suggested that the discussions of cohesion and coherence should be separated from the teaching of writing. Even he discussions of cohesion and coherence should give in equal portions.

d. For the Future Researcher

This research result is expected can be reference for other researcher in conducting research which has the same topic. In addition, this research

still has many weaknesses, so other researchers are hoped can improve it for the better result.
