CHAPTER V

CONCLUSION AND SUGGESTIONS

On an overview of the information discovered and discussed in Chapter IV, the author offers some conclusions in Chapter V. Additionally, this chapter offers some suggestions.

A. Conclusion

A research and development (R&D) design is used in this study. For the second graders at MTs Sunan Gunung Jati, the researcher developed an English digital audiobook as a part of this study. When developing the product, the researcher used the ADDIE model. The researcher draws the following conclusions in light of the findings and discussion:

1. This English-speaking digital audiobook was developed as a supplementary book for second-graders at MTs Sunan Gunung Jati in second semester. This digital audiobook is expected can be used independently by students in improving their speaking fluency. In developing this digital audiobook, the researcher used ADDIE model which has five steps, those are Analyze, Design, Develop, Implement, and Evaluate. The observation sheet and interview were used by the researcher in the first step to determine the needs of the students. The second step in this research was product design. The developing of the product was the third step. Based on the design, the researcher developed the product which was then approved by media, linguistic, and material experts. There were several revision should be done by the

researcher before implementing the product. In the next step, the researcher implemented the product to the students. After that, the researcher made an evaluation of the product. Based on the experts' assessment, the percentage average result is 88.9% with good criteria. Additionally, the feedback from students also showed good result with 81% of percentage average. With all the steps that has been done by the researcher in developing this product, this product is ready to be used by the students in real learning both in the classroom or outside.

2. The name of this product is English-speaking digital audiobook which focuses on English speaking. The product is expected can be used by students as supplementary media in improving their speaking fluency. This digital audiobook consists three chapters with the conversation and text related to the topic as the main content. The audio in this digital audiobook can only be listened to by opening the PDF using Foxit PDF Reader.

B. Suggestions

After concluding the results of this research, the researcher would like to give some suggestions for:

a. Students

This digital audiobook can be used by students in assisting their English-speaking learning by imitating the included audio in the digital audiobook. It can be used by self-regulated or in the classroom with the teacher. The researcher suggests the students to

use this digital audiobook regularly to improve their fluency in speaking English.

b. Teacher

Learning media is always needed in learning-teaching process, this digital audiobook offers as media in the classroom or outside to assist the eight-graders in enhancing their fluency in speaking English. Furthermore, the researcher suggests to the teacher to review the contents of digital audiobook, the researcher here may be careless in revising the contents hence the mistakes in digital audiobook can be a worksheet to the students in quiz 'find the errors'.

c. Further Researcher

Firstly, the product is already made digitally. However, the researcher suggests that the next researcher can fix the audio setting in PDF thus the audio can be listened to in any other application, not only in Foxit PDF Reader. The next suggestion is the next researcher can implement this digital audiobook to assess the effectiveness of this product. However, before implementing this product in further research, the next researcher should review the content of this product. The researcher here may be careless in revising the contents, so that reviewing the content is needed.
