

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter discusses the conclusion of the study. It consist of two points, there are conclusion and suggestion.

A. Conclusion

Many students or learners frequently feel anxious to learn something new, included learning the new languages, especially foreign language. Many factors cause it, ones is the lack of understanding about the language. The more they don't understand, the more they feel anxious, panic, and fear. From some previous studies, the reseachers found that there were correlation between speaking anxiety and speaking performance.

In this study, the researcher conducts a research to investigate the relationship between students' speaking anxiety and their speaking performance. Based on the finding above, the researcher found that there is correlation between students' speaking anxiety and their speaking performance. Based on the students' speaking anxiety, the standard deviation is high, it shows at 13,804. Meanwhile, the students' speaking performance score shows that the standard deviation is 2,607, which means low. It can be said this is a negative correlation, where if the students' speaking anxiety is high, their speaking performance is low. From the calculation of correlation between those two variables, the significance value is at 0.877. Based on the interpretation table of significant level, if it shows at 0,80 – 1,000 means that it is a very high

correlation. So that, it can be concluded that there is a correlation of this research.

B. Suggestion

The researcher has some suggestions English teacher, students, the next researcher.

1. For the English teachers

Learning and practicing the foreign language is not easy. It makes the learners or students being afraid, shy, and feel anxious when they study. The teacher should pay more attention and inspire the students to minimize their anxiety. The teacher has to find strategies to make the students feel comfortable in the class.

2. For the students

The researcher motivates the students to learn English more. The more learn, the more understand. And the more understand, the more being confident.

3. For the next researchers

They are expected to conduct the similar study with a larger population to find out more problems. Hopefully this study can be a source for the next researcher.
