CHAPTER V

CONCLUSION AND SUGGESTION

This chapter presents the conclusion and suggestion of the result of the study as stated on the previous chapter.

A. Conclusion

After collecting and analyzing the data by using the theory from M.A.K. Halliday and Marjolin Vespoor, the researcher conclude that the tweets which used by Gede Prama has a certain pattern. Every nominal style uses a simple sentence, while for the clausal style, they may use compound sentence, complex sentence even compound-complex sentence.

Those patterns happen because each of them has a same rule. The nominal style has the same rule with the simple sentence. That is both of the nominal style and simple sentence only consists of one main clause. While the clausal style has the same rule with the compound sentence, complex sentence and compound-complex sentence. That is they consists of at least two main clauses or one dependent clause with its subordinator.

Complexity in language has a correlation with the language proficiency for both of the reader and the writer. The language proficiency for the writer can be seen from the way he manages his writing in making the tweet, to make the message in the tweet not more than one hundred and forty characters. Besides, the language proficiency is also to make his writing understandable. While the language proficiency for the writer is the way he understands what

the writer means in his message. The reader should be able to recognize the style of the writer in making the tweet whether he writes the clear meaning of his tweets or he makes an implicit meaning.

B. Suggestion

From the finding and discussion above, the writer has some suggestion above:

1. Teacher

The result of this study can be used as an example on linguistics subject and additional information of the development of language, especially variety of language which is happened in this era as the consequence of the development of information and technology.

2. Student

The study is expected to give information to the students because nowadays they almost use a modern social media to have a communication with other people. And one of the most popular social media nowadays is twitter.

3. Further Researcher

The writer as the researcher of this study expects that there will be more research on style-based complexity used in other field. The significant development of information and technology should be balanced with the research by the linguist as the development of information and technology must be followed by a certain language to support them.
