

## CHAPTER VI

### CONCLUSION AND SUGGESTION

In this chapter the researcher presents the conclusion of the discussion. In this part, the researcher also gives some suggestion for the English teacher, students and the next researcher to use Hand Puppet in teaching speaking skill having Imagination Level.

#### A. Conclusion

From this study, the researcher found that the using of Hand Puppet in experimental class was to enjoyable situation in this class, the students freely communicated with each other and they were more enthusiastic when they were joining this class. The main factor that affects students' progress is the students' interest in the way of teaching given so that they were motivated to learn in the classroom. In this case, they are gained into some students of learning.

Based on the previous data analysis the researcher can conclude this study from the data. In pre test, the highest score of experimental and control groups are the same. That is 65. In addition the lowest score both the groups are 45. The mean score of experimental group is 53.97 and control group is 53.87. Then the standard deviation of experimental group is 6.673 and for the control group is 5.943.

In post test, the highest score of experimental group is 90. Meanwhile the highest score of control group is 85. In addition, the lowest at experimental groups 60 and the control group is 50. For the mean score of both the groups,

experimental groups gets 76.21 and control group gets 71.13. It is so significant enough to compare both of groups' mean. From this we can conclude that using Hand Puppet is effective to teach students' speaking skill.

The objective of this research is to investigate the effectiveness of using Hand Puppet in teaching speaking skill. The result of the statistical computation of ANCOVA which is significant at ( $p$ )  $.000 < .05$  level. Since the significant value shown by SPSS output smaller than  $.05$  statically there is enough evidence to reject the null hypothesis, then the alternative hypothesis is received. It means that teaching speaking skill using Hand Puppet having imagination level is effective.

The last finding is about speaking skill toward imagination level. The result of imagination level from experimental class, 11 students got low imagination level. 16 students got average imagination level and 4 students got high imagination level. The next, 8 students got low imagination level. 16 students got average imagination level and 5 students got high imagination level. That is the result from control class for imagination level

## **B. Suggestion**

Based on the research problem and data analysis, the researcher would like to propose some suggestions which hopefully would be useful for the English teacher, the students and the next researcher.

**1. To the teacher**

The researcher hopes that the teacher gives a better method especially when the teacher teaches speaking skill using Hand Puppet. Besides, the teacher should keep control to the students activities and should present the language in an enjoyable, relax and understandable way.

**2. To the students**

By reading the result, it is hoped that the students have to be aware and improve their knowledge, especially in their speaking ability by using Hand Puppet that can help them to improve their speaking skill.

**3. To the Further Researchers**

The other researchers are extremely encouraged to develop other researches related to strategy in teaching speaking. Hand Puppet had the other part to be explored, thus it could be the next research or repetition strategy, which related to speaking strategy. By doing so, it is expected to achieve better outcome in English speaking class.
